

01 Marquee Bugs

Jonathan Knudsen

jonathan.knudsen@duke.edu

Fall 2019

Create a presentation that describes one infamous bug from recent history. Claim the bug you want on Piazza. Choose a bug that no one else is working on.

You can choose any bug you wish; here are a few possibilities if you don't know where to start:

- Stagefright
- Meltdown
- Shellshock
- Rowhammer
- Heartbleed
- POODLE
- KNOB

If you're having trouble finding a vulnerability you want to present, try starting with a high-profile breach or hack and work backwards to see which vulnerability was exploited.

Your presentation should be a video that is between 10 and 12 minutes long. Slides with voice narration would be sufficient; don't go crazy with video editing or special effects unless it brings you bliss.

Provide a useful, clear overview of your chosen bug, answering the following questions:

1. What is the vulnerable piece of software?
2. What is the vulnerability? How can it be exploited?
3. When was the bug found? When was it released?
4. What was the impact of the bug? For example, how many devices were affected? What was the overall cost of the bug?
5. Have there been any high-profile exploits? Have any compromises or breaches happened because of this bug?
6. Has the bug been fixed? Has it been patched?
7. Is there anything else we should know about this bug?

Submit your slides and your video (or a link to your video on YouTube, Vimeo, or elsewhere). Include your sources.
